Grimsby has seen a dramatic transformation in recent years. From humble beginnings, it is now a thriving maritime town, with significant investment taking place across the region. With a bright future ahead and a history of innovation, this vibrant community continues to go from strength to strength.

Towns Fund - £21m
Grimsby secured one of the first towns deals, which is providing a significant investment into Grimsby Town Centre, creating new public realm around the town centre and waterfront, including a new public square at Riverhead Square that will incorporate a wide range of events and festivals, refurbishment of the town's central library to create a green hub, providing new business & skills provision that supports the area's burgeoning renewables sector.

Alexandra Docks
The town's historic waterfront is benefitting from significant investment to improve its connection to the town centre. This includes improved dock frontage, new housing development utilising ultra-low-carbon technologies, and a new box park, promoting technologies and opportunities being created by the area's renewables sector, alongside the existing Fishing Heritage Centre.

South Humber Industrial Investment Programme - £42m
Development of 195 hectares of developable land along the south bank of the Humber, transforming it in highly attractive areas for business investment, including development of new business parks, a link road, and an ecological mitigation project that is the first of its kind in Europe, creating investment ready land for industry.

Cleethorpes Levelling Up Fund - £18.5m
Development of a transformative programme of investments based upon the Cleethorpes Masterplan, including reintroduction of the historic market place, redevelopment of key waterfront site, and the reinvigoration of the Victorian Pier Gardens that will create improved facilities and entertainment for families.

Grimsby boast the largest offshore wind farms in the world. Grimsby has developed as a major energy centre for the North East. It already generates more electricity from renewable solar, wind, biomass and landfill gas than anywhere else in England. The town gains 28 per cent of the electricity it uses from green sources. Its proximity to the biggest cluster of offshore wind farms in Europe has brought around 1,500 jobs to the area, most of them in turbine maintenance.

Grimsby has one of the largest concentrations of food manufacturing, research, storage and distribution in Europe with approximately 70% of the UK's fish processing industry. The seafood industry is worth £1.8 billion to North East Lincolnshire
